

Student Task & Portfolio Repository Documentation

Project Overview

The Student Task & Portfolio Repository is a centralized academic platform where students can upload assignments, projects, practical files, and generate AI-powered portfolios.

Objectives

1. Store student submissions.
2. Enable teacher evaluations.
3. Track submission versions.
4. Generate AI portfolios.
5. Support secure role-based access.

Technology Stack

Frontend: React JS
Backend: Django + Django REST Framework
Database: MySQL
Authentication: JWT
AI Integration: OpenAI API

Frontend Modules

- Student Submission Portal
- Submission History View
- Teacher Evaluation Interface
- Portfolio Generator
- Portfolio Preview Page
- Admin Dashboard

Backend Modules

- File Upload APIs
- Submission Management APIs
- Evaluation APIs
- Version Tracking
- AI Portfolio Generator
- Public Portfolio Hosting

Database Tables

User Table, Submission Table, Evaluation Table, Portfolio Table

Security Features

- JWT Authentication
- Role-Based Access
- File Validation
- Protected APIs

Deployment

Frontend can be deployed on Vercel or Netlify.
Backend can be deployed on Render or Railway.
Database can be hosted on MySQL Server or AWS RDS.

Conclusion

This project provides a scalable academic repository system with AI-powered portfolio generation.

Technology Summary

Module	Technology
Frontend	React JS
Backend	Django REST Framework
Database	MySQL
Authentication	JWT
AI	OpenAI API
